

## Lab Assignment – 4 (2022)

### PH-566

1. Use Newton Raphson method, find the root of the following equation (correct up to 3 decimal places)

$$x^3 - x - 1 = 0$$

2. Use Newton Raphson method, find all the solutions of the following equation (correct up to 4 decimal places)

$$e^{2x} = x + 6$$

3. The circle below has radius 1, and the longer circular arc joining A and B is twice as long as the chord AB. Find the length of the chord AB, correct to 18 decimal places.

4. Estimate the following integrals with  $n = 4$  steps by using (a) the Midpoint rule (b) the Trapezoidal Rule and (c) the Simpson's  $1/3^{\text{rd}}$  rule. In each case, use the exact value of the integral to calculate the absolute error. Express your answer to at least 4 decimal places.

(i)  $\int_0^{\pi} \sin(t) dt$

(ii)  $\int_0^3 (\sqrt{t+1}) dt$

(iii)  $\int_0^3 \frac{1}{\sqrt{t+1}} dt$

Estimate the minimum number of subintervals needed to approximate integrals (i)-(vi) above with an error of magnitude less than  $10^{-4}$  by (a) the Trapezoidal Rule and (b) Simpson's Rule.

5. Some important mathematical functions are very difficult to calculate analytically. For example, consider the *error function* defined as,

$$\operatorname{erf}(x) = \frac{2}{\sqrt{\pi}} \int_0^x e^{-t^2} dt$$

Using Trapezoidal and Simpsons 1/3<sup>rd</sup> rule, calculate the absolute error in the numerical values of  $\operatorname{erf}(x)$  (for  $x=0, 0.5$  and  $1.0$ ) as a function of increasing number of subintervals (say, 100, 1000 and 10000). (Table for  $\operatorname{erf}(x)$  values for different  $x$  is given below).

Complementary Error Function Table													
x	erfc(x)	x	erfc(x)	x	erfc(x)	x	erfc(x)	x	erfc(x)	x	erfc(x)	x	erfc(x)
